

## Discover the Full Potential of Concrete Machinery

### Unbeatable Solutions for Concrete Mixer Trucks & Slipform Pavers

Morrell Group provides a comprehensive product portfolio that includes hydraulic pumps, motors, valves, and controls well-suited for the concrete industry. Our extensive industry knowledge, product portfolio, and accessible resources provide OEMs with the tools and technology to successfully adopt and integrate the latest new and updated technology into their transit mixers, volumetric mixers, continuous pavers, and slipform machines, allowing operators and end users more product options and better machine control.

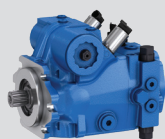

### Experienced Guidance

Morrell Group is dedicated to the mobile/off-highway industry, providing unmatched value by partnering with you as an extension of your engineering team from initial concept to integration. By working closely with you and your applications, we ensure that our custom solutions precisely align with your needs, allowing your concrete machinery to reach its full potential.

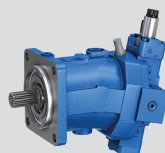

### Pave Your Way to Success

**Call 248-373-1600, email [info@morrellinc.com](mailto:info@morrellinc.com), or visit [morrell-group.com/discover-the-full-potential-of-concrete-machinery/](http://morrell-group.com/discover-the-full-potential-of-concrete-machinery/)**

## Pumps

- Bosch Rexroth hydrostatic pumps bring new levels of efficiency to concrete machinery
- Increase space and weight savings, improve leak tightness, and save on fuel consumption

## Motors

- Reliable and durable Bosch Rexroth A6VM motor
- Wide range of control and precise operation in drum drives
- High starting efficiency and excellent slow-running characteristics

## Load Sense Valve Solutions

- High-performance capabilities
- Flexibility ideal for concrete machinery

## Sensors

- Up-to-date on industry standards, trends, and technologies
- Creates numerous possibilities in concrete applications

## Coolers

- Tailor-made to customer requirements to ensure appropriate thermal management
- Extended, trouble-free operation

## Filters

- Broad filter range for liquids and gaseous media that supports oil and fluid conditioning
- Keeps machines running safely and efficiently

## Accumulators

- Improve ease of use, secure hydraulic systems, and increase energy efficiency

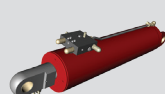

## Wireless Remotes

- Ergonomic, impact-resistant wireless remotes
- Reliable, interference-free operations for various functions and actions

## HMI and Electronic Controls

- Highly efficient ergonomic controls and feedback
- Hydraulic and electronic joysticks, foot pedals, and displays

## Actuation Solutions

- Help concrete OEMs meet the challenges of today's mobile market
- Provide access and control over the power, safety, and efficiency of machinery
